

TORERO®

OIL PULSE TOOLS &
TORQUE MEASUREMENT EQUIPMENT

TORERO®

2025A

TORERO®

TORERO TOOLS' SUCESS - YOUR PROSPECTS

Chu Dai Industrial Co., Ltd. is the leading and first manufacturer of oil-pulse tools in Taiwan . Since its establishment in 1997, Chu Dai has been investing intensive endeavors into providing advanced machinery technology for a better tomorrow. We provide the world with quality oil-pulse torque tools, clutch type tools, grinding tools and torque measuring equipment. Our brand is "TORERO". Our tools are available for automobile industry, home electric appliance , energy, building construction , aviation and shipbuilding industry.

Our factory have intensive R&D and technology to create high precision tools for industry market. We are still continuously developing feature TORERO brand tools for industry market . We have designed and improved a number of patents, especially oil-pulse tools enjoy high reputation in the field of manufacturing.

Chu Dai is an ISO-9001 quality control manufacturer. Products are also own CE certificate. Our oil-pulse tools are the best choice of professional tightening tools, automobile assembly factories and production lines. " Integrity , Quality , Innovation , Unceasing improvements , Customer first , Continuous growth" are the very core values and cornerstones where Chu Dai's crew-build up prosperity and pride. Working with us multiplies your performance.

Our business philosophy

"Honest , Innovation, Cooperation and Concern"

TORERO®

THE SPIRIT OF TORERO

Create international brand • Provide customers with honest service • Adhere to concept of precise R&D • Innovate product •Expand market • Cooperate with partners •Sustainable product management • Sincerely concern customers

1	Product introduction	
6	Pistol/straight oil-pulse tool	
	pistol shut-off oil-pulse wrench/screwdriver.....	6
	straight shut-off oil-pulse wrench/screwdriver.....	7
	pistol non shut-off oil-pulse wrench/screwdriver.....	8-9
	straight non shut-off oil-pulse wrench/screwdriver.....	10
11	Angle oil-pulse tool	
	Angle shut-off oil-pulse wrench/screwdriver.....	11
	Angle non shut-off oil-pulse wrench/screwdriver.....	12
13	Special oil-pulse tool	
	duckbill gear wrench.....	13
	pistol angle non shut-off oil-pulse wrench.....	14
	oil-pulse double fixed torque wrench.....	15
17	Oil-pulse gear tool	
	pistol non shut-off geared oil-pulse tool(close-end).....	17
	pistol 26°angle non shut-off geared oil-pulse tool(close-end).....	18
	straight non shut-off geared oil-pulse tool(close-end).....	19
	straight 26° angle non shut-off geared oil-pulse tool(close-end).....	20
	straight-type air-cutoff hydraulic pulse torque-setting wrench (close-end).....	21
	straight-type stall-type hydraulic pulse torque-setting wrench (box-end reinforced custom type).....	22-23
	socket geared type.....	24
25-28	With signal tube tool	
29-30	Reverse torque-setting tool	
31-32	OBT、OBNpistol/ straight size	
33	Pneumatic gear wrench (open-end type)	
	Straight-type stall-type direct-drive gear wrench (open-end type).....	33-34
	Straight-type stall-type direct-drive gear hydraulic pulse torque-setting wrench (open-end type).....	35-37
39	Pneumatic clutch-type torque-setting screwdriver	
40	Pneumatic grinder	
41	Torque tester	
	Pneumatic tool accessory.....	42-46
	selected tool type/using reference data.....	47-50

Patent Diagrammatic

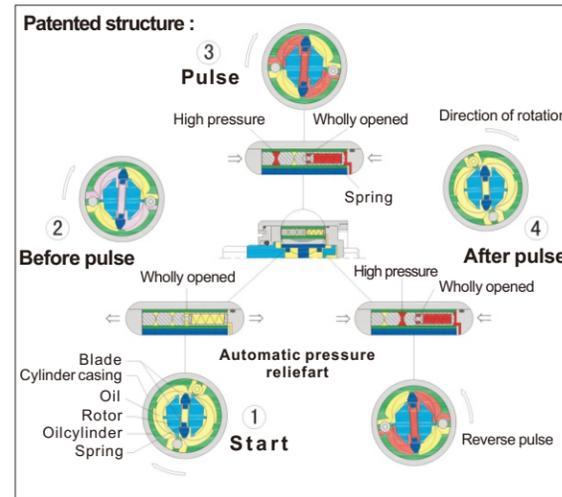

Our tools have been registered invention patents at multiple countries. You will touch on our patents even if your tools are improved. We would pursue legal responsibility if you copy our tools.

1. OBT series oil-pulse tools :

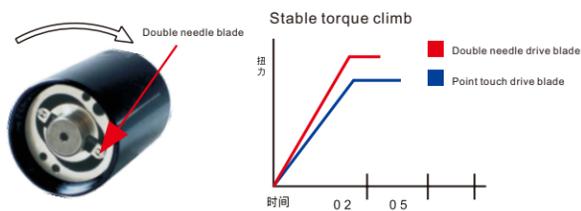

Our company has unique and new technology of "automatic pressure relief function".

Old type oil-pulse tools : Oil routing size depend on target torque when high-pressure oil region flow to low-pressure oil region in tightening process and pulsing unit. It make speed climbing slowly and torque unstably during tightening process.

New type oil-pulse tools : These tools use unique and patented technology of "automatic pressure relief function". This new technology make oil pass "pressure relief device" when high-pressure oil region flow to low-pressure oil region. This new device will automatically adjust flowing oil size in tightening process and pulsing unit . It will effectively improve tightening and make torque stably. This new technology improve fastening requirement more ideal. In addition, the target torque will be the same as old types with this new device.

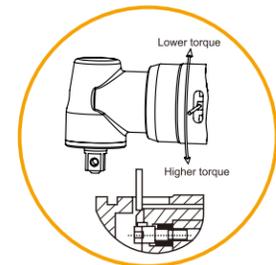

2. Double Needle Roller Illustration

Aiming at the torque climbing speed and the automatic air cut-off stability, the accuracy can be quickly exerted in the case of high and low air pressure

3. Angle tool adjusting torque device :

It is convenient for fast mini-adjustment and correction to use rotary adjusting torque device.

4. Automatic pressure relief device :

Automatic pressure relief device

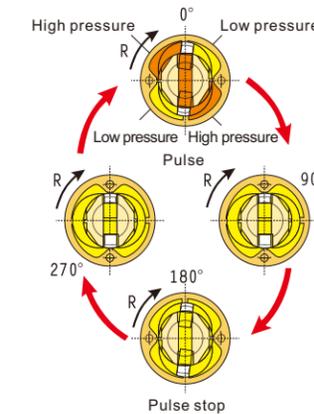

This device make pulse more smoother, torque climbing faster and efficient.

Features of oil-pulse tool

> Double-blade pulsing unit

Oil-pulse tool is almost no reaction force at handle due to pulsing cycle is very short. This is different from impact wrenches. Oil-pulse tool won't have metal-to-metal collision. It offer stable pulse. This can reduce vibration , noise and make tool have long life . All of our oil-pulse tools are combination of double-blade pulsing unit and double cylinder rotor. It can increase 50% weight power ratio. It react speed fast when it tighten. It performed more excellently at soft joint.

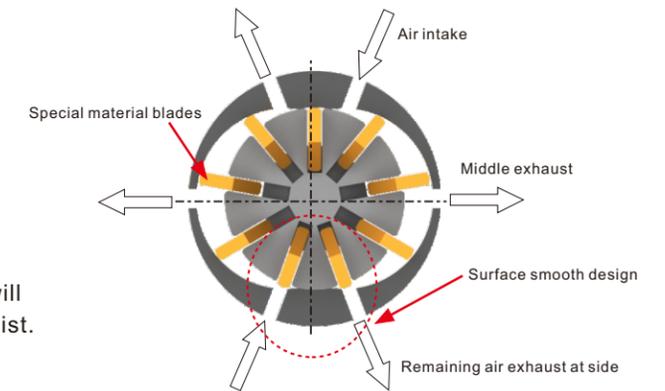

> Double cylinder rotor

High efficient rotor

- New design and energy-saving type air rotor
- Special coated rotating blades
- Middle exhaust
- Surface smooth design
- Drain away excess air

Low oil mist

We use self-lubricating blades and cylinder. It will reduce the problem of more lubricants and oil mist.

New series appearance of oil-pulse tools

- 1 The grip is ergonomic. There are more spaces for fingers. Fingers feel more comfortable.

- 2 The top handle area is smaller now. It make pressing trigger will be more flexible.

- 3 Handle grip is oval shape which meet ergonomic. It reduce sliding at tightening process. It can resist reaction-force

- 4 It don't need to use special tool for maintenance and adjusting inside parts. It can use general open-end wrench for maintenance and adjusting insideparts.

- 5 Standard trigger is as art shown.

The extended trigger is only suitable for below series :
OBT-180PD
OBT-150PD
OBT-130PD

Choosing description of high and low pressure oil-pulse tool

Different gas source conditions will lead to changes in a tool's performance, gas cut-off speed, service life, and other aspects.

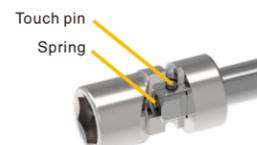

Tool head type : Touch pin type and through pin type

Tool head is square. Head has touch pin type and through pin type for choosing(We normally provide touch pin type if you don't specify any type.)

Through-pin type :

It use through-pin and o-ring to fix socket. It use for changing socket infrequently (It need to buy.)
O-ring and through pin are packaged in the box.

Touch-pin type :

It use touch-pin to fix socket. It use for changing socket frequently.
The spring and touch-pin are already installed on tool when export.

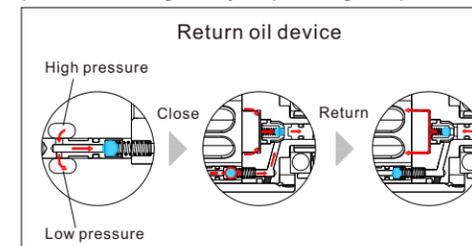

Principle of OBT series tool

The high-precision automatic shut off oil-pulse tools are with high precision , high efficiency and excellent durability at highest tightening peak.

Features :

Reliable torque precision and fast shut off efficiency

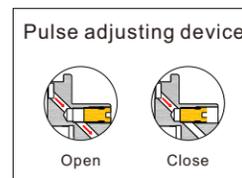

- 1. Automatic relief device(PAT.P) :**
Reference the first one on catalogue page 1 .
- 2. Return oil valve device(PAT.P) :**
New R & D patent(Return oil valve- fast return oil system) can reach more accurately repetitive torque. It can effectively solve torque error in each tightening process and greatly improving torque accuracy.

- 3. We offer various return- springs for choosing to satisfy customers at different air source environment.**
The new R&D various return- springs can quickly shut off even at the lowest air pressure 0.35Mpa.

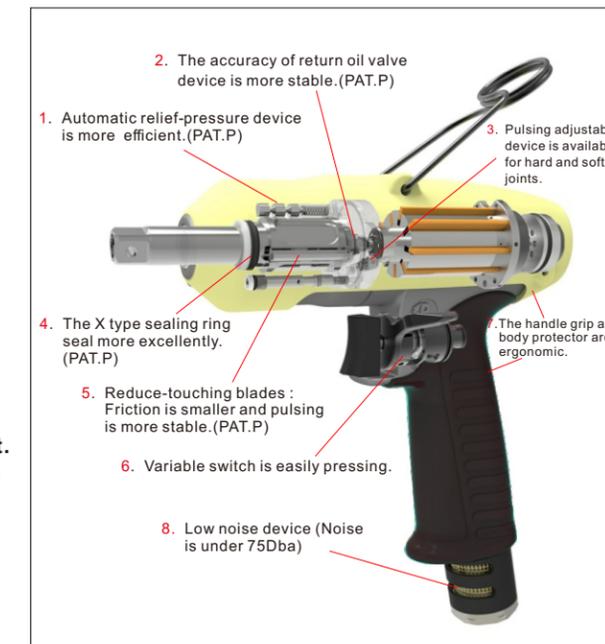

Raise effectively and reduce costs :

- 4. Pulse adjusting device(PAT.P) :**
This adjusting device is for satisfying soft and hard joint requirement. It also can switch shut-off and non shut-off.

- 5. X-type sealing ring(PAT.P) :**
Pulse unit have dozens of times pulse/ per second under high pressure environment. This is a big challenge for pulse unit's sealing . We already have accumulated technology and researched for many years. The new developed X-type sealing ring have excellent effect of sealing and long life.

- 6. Reduced touch blades(PAT.P) :**
The new type reduced touch oil-pulse blades contact cylinder's R-point is more smaller. We use fine surface grinding technology for these blades . Blades will be more durable and sealing excellently. Every pulse strike will be more stable. This fine surface grinding technology also can reduce cost of maintenance blades.

New pulse blades type sectional view :

- New type pulse blades
1. Compressing process is more closely
 2. R-point contacting area is more smaller.
 3. Torque climbing is more faster.

Reduce labor strength of operator

7. Variable switch(PAT.P) :

Variable switch make operator feel comfortable in any pressure environment. Operator won't have the pressure of pressing trigger in continuous using.

Contribution of environmental protection

8. The new type product bodies are ergonomic.

These tools are low noise and low vibration. They are also with small reaction force oil-pulse device. The small handle design reduce burden of hand、finger and wrist. Tools don't paint and change to sand blasting for environment protecting. We use green material for handle grip and body protector.

9. Low noise device :

New developed low noise device can be friendly for operator and environment.

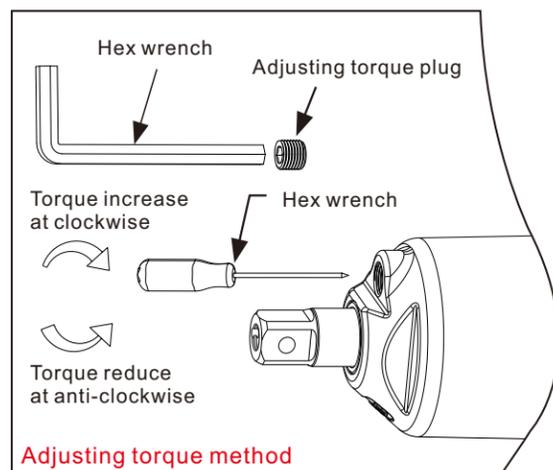

Oil-pulse tool

Oil-pulse tool choosing guide

1. It need to understand air pressure、bolt size、material、torque requirement and joint situation when choose an oil-pulse tool. (It will lose torque when use long socket or universal socket. It would choose a larger oil-pulse tool when use long socket and universal socket.)
2. It don't suit to use shut-off oil-pulse tool when use long socket or universal socket.

Oil-pulse tool adjust torque diagram (Pistol and straight type)

1. Remove hex bolt on front end plate with a hex wrench.
2. Turn anvil by hand until hex. nut hole on front end pate is visible adjusting screw.
3. Hex screwdriver turn bolt toward clockwise is increasing torque. Hex screwdriver turn bolt toward anti-clockwise is reducing torque.
4. Tighten hex screws after adjusting torque.

Pistol shut-off oil-pulse wrench

Model	Bolt size mm	Torque range Nm	Square drive in	Free speed rpm			Length mm	Weight kg	Air inlet in	Rec. hose size mm	Air consumption m³/min	Noise level dB

Note : Oil-pulse tool can reach torque will be slightly different as actual tightening torque. It will depend on condition of working area and joint situation. Testing the selected model in actual condition is advised. Please reference the following :
 Hard joint application : 70% of the maximum torque range in the catalogue.
 Soft joint application : The minimum of the torque in the catalogue.

Angle oil-pulse tool adjust torque diagram :

- 1) Turn trigger cover by hand and make cover hole expose.
- 2) Turn anvil by hand until torque screw is visible from the hole.
- 3) Don't rotate anvil and fixed it. Using a adjusting torque wrench toward down is adjusting high torque. Using a adjusting torque wrench toward up is adjusting low torque.
- 4) Turing switch cover the hole of top cover after adjusting Torque.

Torque screws as below art shown :

Note : Oil-pulse tool can reach torque will be slightly different as actual tightening torque. It will depend on condition of working area and joint situation. Testing the selected model in actual condition is advised. Please reference the following :
Hard joint application : 70% of the maximum torque range in the catalogue.
Soft joint application : The minimum of the torque in the catalogue.

Pistol angle non shut-off oil-pulse wrench

Geared arm can be random 360° installed to suit for different working condition. (Directions for remark when ordering)

This tool is applicable to space narrow and large torque workstations.

Figure 1

The torque is directly transmitted to the bolt, with little torque loss and fast speed. High precision and convenient operation.

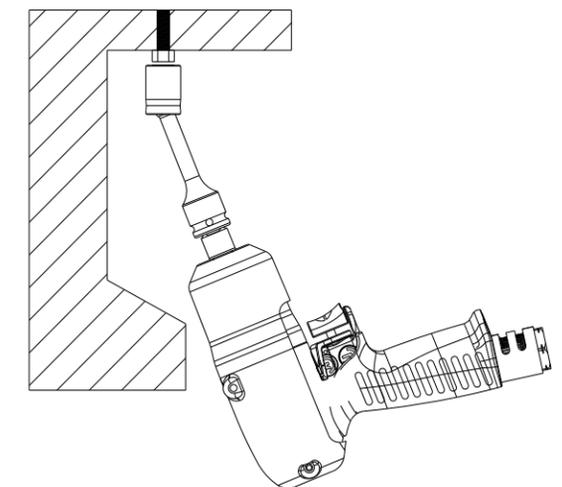

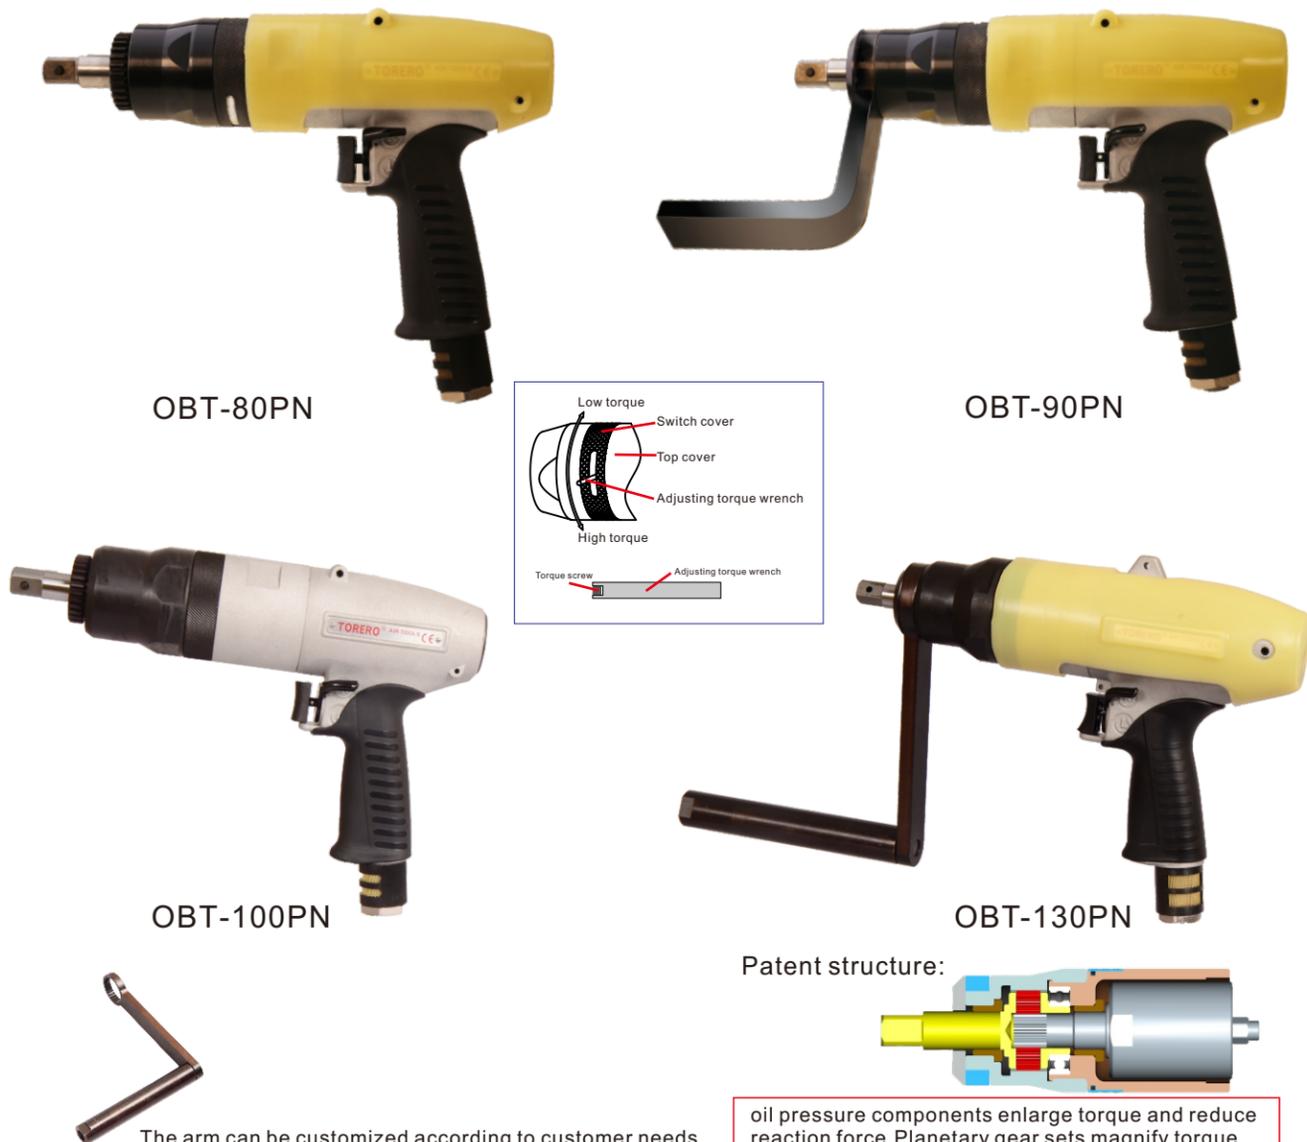

Figure 2

Using universal sleeve, the torque loss is over 50%, and the tightening time is long. Poor precision, large tool consumption.

Model	Bolt size mm	Torque range Nm	Square drive in	Free speed rpm			Length mm	Weight kg	Air inlet in	Rec. hose size mm	Air consumption m³/min	Noise level dB
				0.4MPa	0.5MPa	0.6MPa

Note : Oil-pulse tool can reach torque will be slightly different as actual tightening torque. It will depend on condition of working area and joint situation. Testing the selected model in actual condition is advised. Please reference the following :
Hard joint application : 70% of the maximum torque range in the catalogue.
Soft joint application : The minimum of the torque in the catalogue.

Oil-pulse double fixed torque wrench

Patent structure:
oil pressure components enlarge torque and reduce reaction force. Planetary gear sets magnify torque reduce rotational speed. This structure is very suitable for soft connection. (PAT.)

Product advantages: specially designed for bicycle shaft fixed torque wrench for ultra soft connection 360 degree design

Model	Torque range	Square drive	Free speed	Length	Weight	Air inlet	Rec. hose size	Air consumption	Noise level

Note : Oil-pulse tool can reach torque will be slightly different as actual tightening torque. It will depend on condition of working area and joint situation. Testing the selected model in actual condition is advised. Please reference the following :
Hard joint application : 70% of the maximum torque range in the catalogue.
Soft joint application : The minimum of the torque in the catalogue.

Non shut-off geared oil- pulse tool(Close-end)

Close-end geared oil-pulse tool is available for small spaces. Especially the wrench head with angle can finish job at very difficult areas . These areas are hard finished by ordinary tools. Products with oil-pulse construction reduce reaction force. Operator use oil-pulse tool will feel more comfortable.

Pre-tighten geared wrench

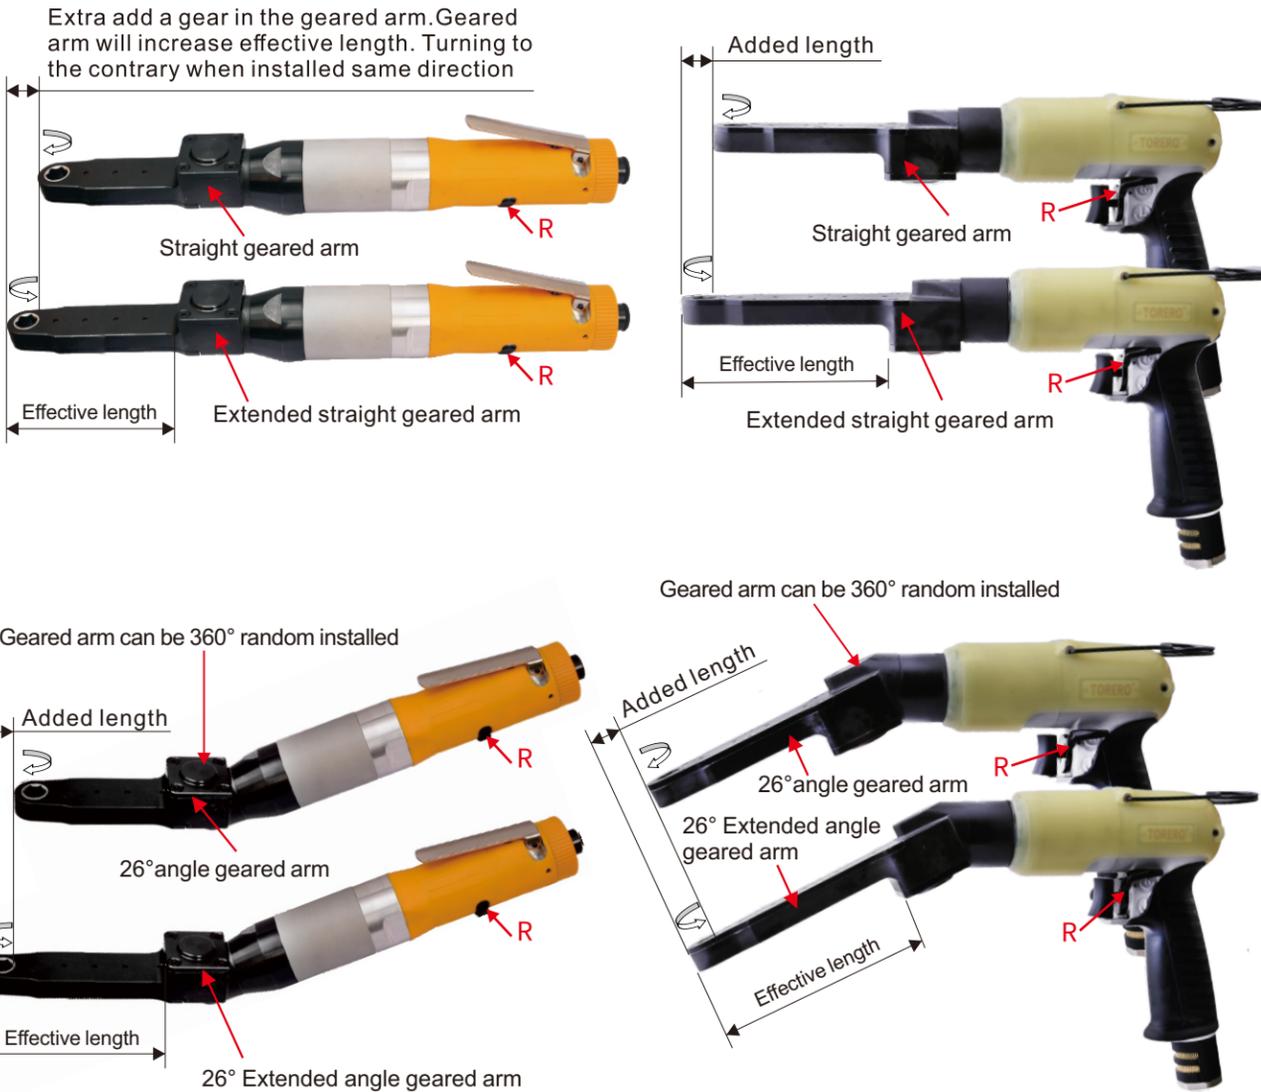

Note: the gear arm will change the tightening direction due to different installation directions.

Note : Oil-pulse tool can reach torque will be slightly different as actual tightening torque. It will depend on condition of working area and joint situation. Testing the selected model in actual condition is advised. Please reference the following :
Hard joint application : 70% of the maximum torque range in the catalogue.
Soft joint application : The minimum of the torque in the catalogue.

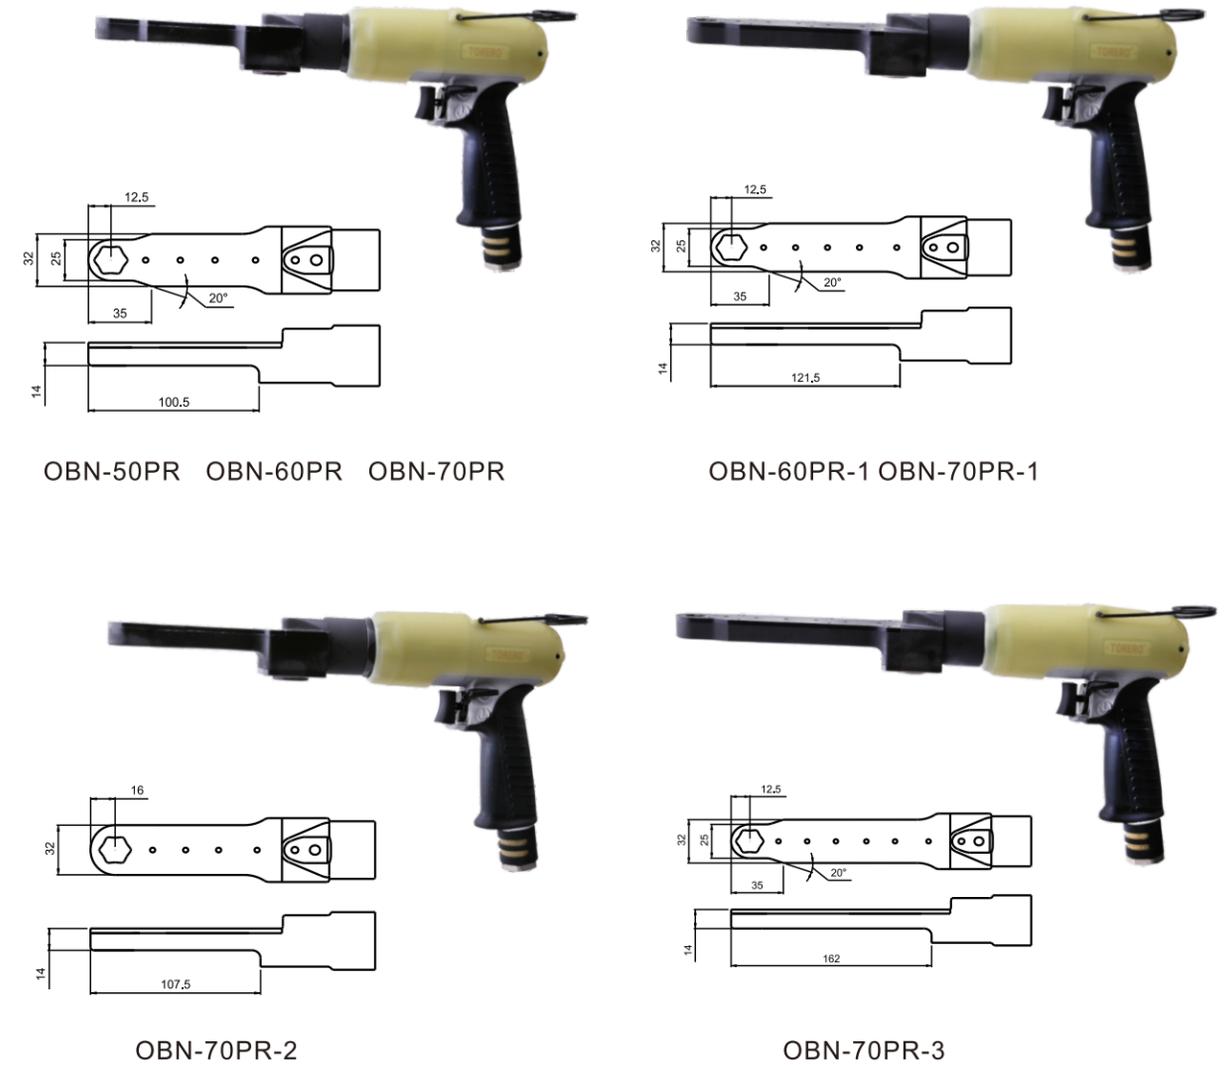

Non shut-off geared oil- pulse tool(Close-end)

We offer various geared arms which include straight geared arm, 26° geared arm and extended 26° geared arm. These geared arms have different lengths and shapes to suit for various working environments.

The extended arm is more a gear than standard geared arm. The socket turn to opposite direction if geared arm and tool installed direction not change.

Socket geared type

Socket gear has three options :

1. Through hole type
2. Magnetic type
3. Extended magnetic type

Through hole type

magnetic type

Extended magnetic type

1. Through hole type :

Hex is through hole type. The center of socket gear is fitted with a retaining ring.

2. Magnetic type :

Socket is provided with magnet . The other side is hex. Socket gear install on geared arm don't protrude geared arm outside.

3. Extended magnetic type :

Extended magnetic gear socket's length is on magnetic type basis to increase length. It make socket gear protrude geared arm outside after installing tool.(The length can be customized by customer. But the length couldn't protrude over 10mm.)

Please kindly verify us which type you need to order. We generally install non-magnetic socket on tool.

Note : Oil-pulse tool can reach torque will be slightly different as actual tightening torque. It will depend on condition of working area and joint situation. Testing the selected model in actual condition is advised. Please reference the following :

Hard joint application : 70% of the maximum torque range in the catalogue.

Soft joint application : The minimum of the torque in the catalogue.

Unlock-prevent controlled tool

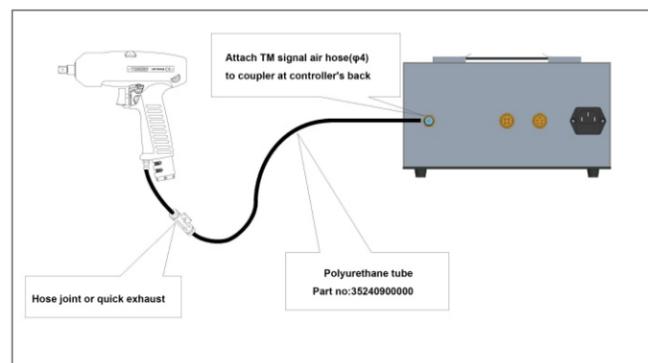

It can use controller to avoid no-locking screw. Tool has a small tube connect with controller. Tool will be from differential pressure during in tightening process to tell controller calculating the amount of differential pressure. One differential pressure is one screw.

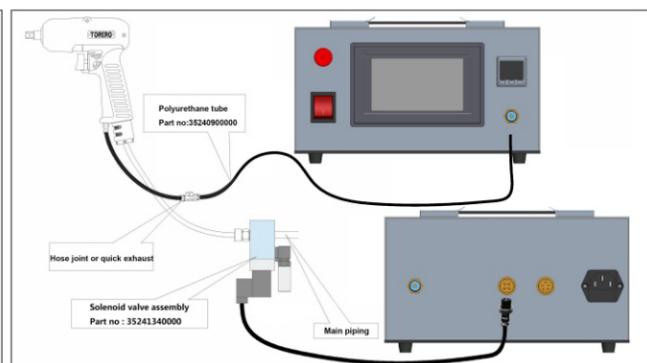

Order description : RE series can use different brand controllers.

OBT & OBN series straight and angle sizes

Description : The shape size of OBT high pressure and low pressure oil-pulse tool series are same.

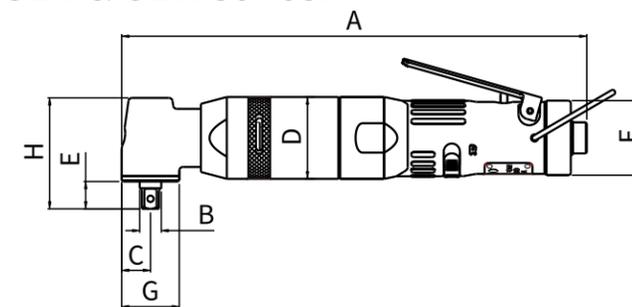

Straight size of OBT and OBN series:

Unit: mm

Model	A	B	C	D	E
OBT-40SD	218	23	12	45	41
OBT-50SD	218	23	12	45	41
OBT-60SD	228	21.5	12	45	41
OBT-70SD	240.5	24	12	47	41
OBT-80SD	246.5	26	12	52	47.5
OBT-81SD	251.5	31	16	52	47.5
OBT-40SH	220.5	25.5	18	45	41
OBT-50SH	220.5	25.5	18	45	41
OBT-60SH	230.5	24	18	45	41

Straight non shut-off gear tool(Open-end)

Straight non shut-off gear tool(Open-end)

ORDER METHOD :

Half-press trigger is automatically resetting.
Total-press trigger is tightened.

It need to note opposing edge size of socket gear after choosing a model.
For example :

Model	Opposing edge size of socket gear
OBN-50SW	8 or 9 or 10

There are various hex sockets for choose. Customized is according to customer's requirement.

Geared arm can be 360° random installed.
A variety of general gear arms can be replaced according to requirements.

Reduction gear set Socket geared type:

Light weight, small vibration and thinner.

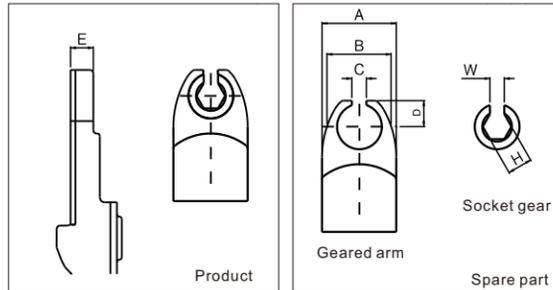

12 or 6 angles Through hole type Blind hole lengthening

Through hole type: The hexagon is a through hole .Positive and opposite sides are the same.

Blind hole type: One side is the same as through-hole type Another side is blind hole with U-shaped incision

Geared wrench open-end size

Product's front end consist of geared arm and socket gear. Same model tool is with same geared arm. It can be replaced with different size of socket gear.

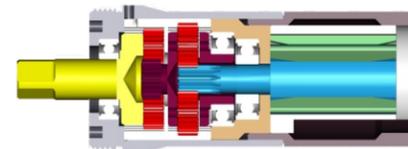

Specification :

The open-end size C on geared arm is larger than open-end size W of all socket gears that can be mounted on this part.
It only need oil tube's diameter is smaller than open-end size W of socket gear when choose socket gear.
The size H and W of socket gear can be customized by customer. But size W can't bigger than size C.

Product geared arm size :

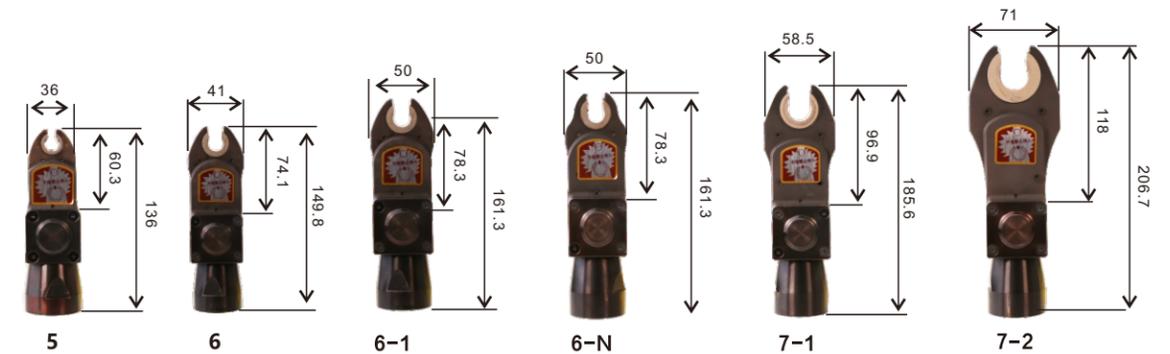

Gear arm number	A	B	C	D	E
5	36	31	8.2	11.6	12
6	41	36.5	15	15.3	12

Note : Oil-pulse tool can reach torque will be slightly different as actual tightening torque. It will depend on condition of working area and joint situation. Testing the selected model in actual condition is advised. Please reference the following :
Hard joint application : 70% of the maximum torque range in the catalogue.
Soft joint application : The minimum of the torque in the catalogue.

Sleeve gear type

Through-hole type

Through-hole extended type

Through-hole type: The hexagonal and dodecagonal holes are through-holes, with the front and back sides being identical.

Through-hole extended type: On the basis of the through-hole type, the sleeve gear is lengthened, so that after the tool is installed, the sleeve gear protrudes from the gear arm.

(the length can be customized according to customer requirements, but the protruding length cannot exceed 40mm).

Sleeve Gear Selection Table

Direct drive tool:

Ratchet head number	Through-hole type socket specifications	Specifications of through-hole extended type socket
5	8、9、10	8、9、10
6	12、13、14、15、16、17	12、13、14
6-1	16、17、18	15、16
6-N	16、17、18	15、16
7-1	19、20、21、22、23、24	19、21、22
7-2	25、26、27、28、29、30	21、22、24、25、26、27、28

Hydraulic pulse tool:

Ratchet head number	Through-hole type socket specifications	Specifications of through-hole extended type socket
50-1	8、9、10	8、9、10
50-2	12、13、14、15、16、17	10、12、13、14
60-1	16、17、18	15、16
60-N	16、17、18	15、16
70-1	19、20、21、22、23、24	19、21、22
70-2	25、26、27、28、29、30	21、22、24、25、26、27、28

Note : Oil-pulse tool can reach torque will be slightly different as actual tightening torque. It will depend on condition of working area and joint situation. Testing the selected model in actual condition is advised. Please reference the following :
 Hard joint application : 70% of the maximum torque range in the catalogue.
 Soft joint application : The minium of the torque in the catalogue.

Straight shut-off clutch screwdriver tool

Order accessories
Order no. : 37513880030

1/8" to 1/4" adapter

The tool air inlet thread PF 1/8 is G 1/8. You can purchase 1/8" to 1/4" adapter if you need to turn air inlet to PT 1/4.

Tool repair fixture

Air motor fixture :
It is a connected set which use for removing and assembling straight and pistol type tool.
It is used for maintenance rotor set.

Oil-pulse cylinder pressing plate fixture :
It is used for removing and assembling oil-pulse cylinder pressing plate of oil-pulse cylinder set.
It is used for maintenance Oil-pulse cylinder set.

Rear end plate fixture :
It is used for removing and assembling rear end plate of OBT pistol type tool.
It is used for maintenance balanced switch set.

Tool repair fixture

The following sub-categories are with same model. Fixture is same. Below table only list one.

For example : OBT-60PD
 OBT-60PD-RE With signal tube tool

What is torque

Torque is distance x force or anvil rotary force .
Torque unit : kg-cm , lb-in , N-m

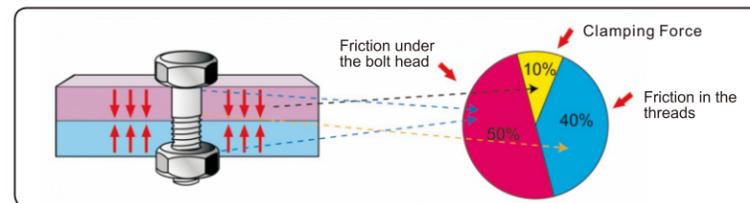

It need to think over below elements before testing torque.

1. Material :

Materials will decide bolts type, tighten tool and tighten size of force. The commonly used materials are iron, aluminum, plastic and wood...and so on.

2. Friction :

In order to ensure working quality of assembly line and be controlled to achieve consistency. It need to think over the influence of frictional force generated by the joint surface. Such as frictional force are created by screw bearing surface, bolt thread and gasket. It generally will loss 90% torque by friction in screw tightening process. It only 10% torque is used to tighten screws.

Concept of torque control

The industrial assembling lines' engineers are still looking for suitable solution of efficient controlled torque today. They are very important elements from selecting tools to producing line design. It can effectively reduce labor costs and improve product quality if concept of torque control can be implemented in produced department. This is industrial upgrading must be implemented policy.

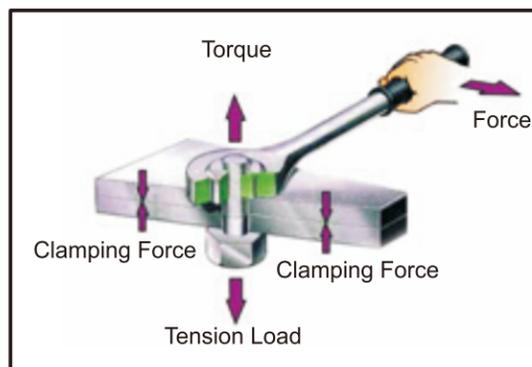

Assembling screw is an important process at assembling production line. Its mainly analysis point is using how many "clamping force" in locking operation. The traditional pneumatic tools couldn't meet assembling market demand in the international standardization coming today. How to select "correct" tool. It will be the key to improve industrial competition.

The concept of tighten screw :

It's still very common that screws (nuts, bolts and so on) are used in professional assembling process. It must think don't hurt main parts and bolt threads in process to use screws assembling , tighten or loosen.

Three elements of mainly affect screw assembling process:

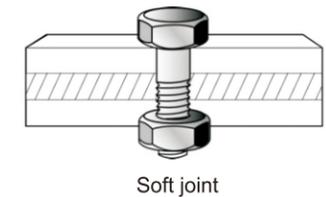

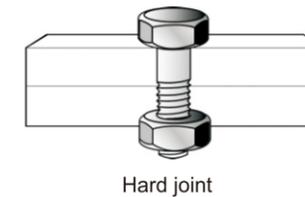

Screws , joint material , tool type

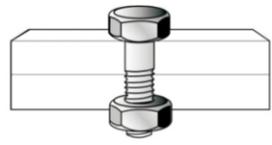

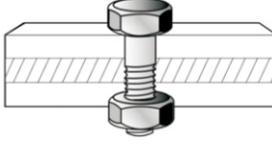

P.S. Clamping force : Two same or different materials closely bind together force.

Joint material type

1. Hard joint type : It use screws to tighten hard materials. This connected method more don't affect the setting of tightening torque.
2. Soft joint type : It use screws to tighten more soft materials. It need to turn one more circle to tighten materials. It need to properly increase the torque value for tightening.

Tool selection and scope

Applicability	Applicability Statement
Hard joint 	1. Hard joint : Metal to metal directly connect. 2. Tighten process : Light torque screwed into and fast tighten. 3. Applicability : It is very suitable for using oil-pulse tools
Soft joint 	1. Soft joint : Between metals connect washer or metal connect with soft material. 2. Tighten process : Light torque screwed into and gradually tighten. 3. Applicability : It suit for using oil-pulse tools. It will increase times of maintenance. (oil change) if soft joint compare with hard joint.
Mechanical tooth screws 	Best
Triangle screws Self-locking Self-attack 	Good
Self-attack/Drilling screws/ Wood working screws 	Poor : These screw threads are less suitable for oil- pulse tools.

Application and comparison of oil-pulse tool

TORERO SHUT-OFF SERIES AND NON SHUT-OFF SERIES

Available for non shut-off oil-pulse tools' conditions :

1. Hard joint and soft joint bolts combined sets.
2. The extended couplers , larger tolerances of sockets or universal socket are less suitable for shut-off oil-pulse tools.(Torque transmission will be affected.)
3. The assembling lines' assembly space or operator have the lightest weight required.
4. Assemblies require accuracy and tolerances that can accept non shut-off oil-pulse tools' accuracy.
5. Budget consideration.

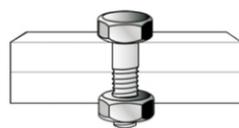

Available for shut-off oil-pulse tools' conditions :

1. Specified by Engineers.
2. he connected materials of soft joint don't beyond 180° which will be more available for shut-off tools.
3. It reduce training operators and related influence.

HARD JOINT AND SOFT JOINT

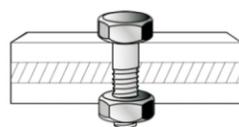

1. Hard joint : It mean that both screw shaft surface and object surface connect each other by the "snag torque of pre-tightening. The torque applied is atisfied until object is tightened. The screw rotating degree is under or equal to 60°.
2. Soft joint : It mean that both screw shaft surface and object surface connect each other by the "snag torque of pre-tightening. The torque applied is satisfied until object is tightened. The screw rotating degree is larger than 360° or equal to 360°.
3. Snag torque : It mean that the torque beyond the bolt thread and object surfaces' friction to make bolts start to create axis force to connect objects.

It is best effective when use hard joint.

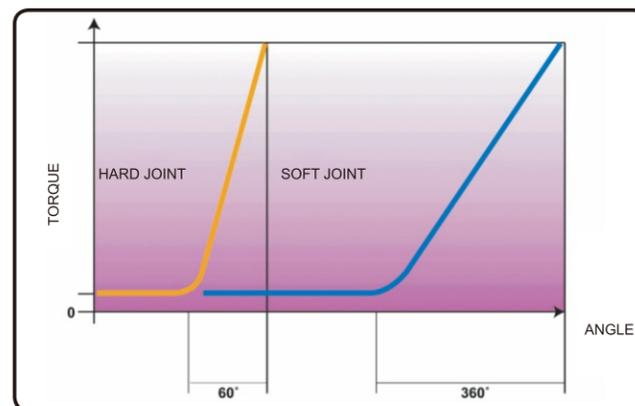

Hard joint

Please don't beyond 360° when use on soft joint. Otherwise the tools' efficiency will become worse. It had better choose a larger torque tool for soft joint.

Soft joint

Specification

Model :

Please kindly verify model no. when you order.

Bolt diameter (Reference) :

If actual torque value isn't clear when choose tool. Please kindly refer bolt diameter for choosing correct model. Please refer this page - standard bolt-tightening torque list for applicable torque value of each bolt diameter.

Torque range :

The torque value is testing at standard environment and on torque testing machine.

Socket or bit :

It is the shape and size of output shaft.

Socket gear opposing size :

It means that can correspond to both faces' width for hex. socket of gear wrench. This tool type is equipped with a tightening hexagonal socket. It need to specify size if you order.

No load speed :

No load speed is numbers of turning per minute. The testing standard is 0.63 Mpa(6.3 bar , 90 psi) at no load situation.

Working pressure :

It means the best pressure for tool working.

Standard bolt -- Tighten torque list :

Torque(Nm) specification	Bolt level							Torque(Nm) specification	Bolt level
